EDUCATION

BSc Information Systems | Singapore Management University **2025 – 2029**
School of Computing and Information Systems

- **Relevant Coursework:** Computational Thinking and Programming, Computing Fundamentals, Algorithms and Programming, Data Management, Web Application Development, Interaction Design and Prototyping, Modeling & Data Analytics, Business Process Analysis & Solutioning
- **GPA:** 3.18 / 4

Higher Secondary Education | Maharashtra Board **2023 – 2025**

- Grade 12: 88.33%, Grade 11: 90.46%; first rank holder in Science stream / 100 percentile, Grade 10: 96%
- AP Calculus AB: 4/5; AP Calculus BC: 4/5

PROJECTS

GeBIZ Procurement Red Flags | Procurement Spend & Risk Analytics on S$123.8B of Government Tenders **GitHub**
MySQL, Python (pandas, SciPy, matplotlib), Power BI

- Cleaned 18,464 GeBIZ tender records (FY2021–FY2025) in MySQL into 15,738 analysable awards worth S$123.8B: parsed dates, standardised 6,150 supplier names, and excluded 2,087 sub-$100 panel contracts that would distort the tests.
- Designed 7 audit red-flag tests (supplier concentration, repeat winners, 30-day award clustering, March year-end spikes, round-amount bias, Benford's Law with chi-square, and log-scale z-score outliers), flagging 7 of 42 agencies for Benford deviation, 12 agencies with March spikes and 26 outlier awards.
- Combined all 7 flags into a weighted risk score for 10,602 agency–supplier pairs, cutting the review population by 99.8% to a 24-pair priority list for audit follow-up.
- Built a 3-page Power BI dashboard with DAX measures, slicers and drill-down from each flagged pair to its underlying awards; documented methods and limitations on GitHub.

BidSmart | Hawker Stall Tender Bidding Model (Modeling & Data Analytics Group Project) **GitHub**
Microsoft Excel (Pivot Tables, Analysis ToolPak, dynamic lookup and array formulas), Tableau

- Cleaned and structured 4,970 NEA tender records from a 94-page PDF (34 documented cleaning steps, CPI inflation adjustment, centre geocoding), then owned the market analysis and bid prediction stage of a 5-person Excel decision model that recommends bids for hawker stall tenders, analysing 1,889 food-stall awards across 89 centres (2019–2026).
- Built a log-linear regression on 1,453 bids with 8 predictors, quantifying key price drivers (Halal and Indian stalls 53–65% cheaper, East region +120%, real rents rising ~4% a year), and validated it on a 353-bid 2025–26 holdout set.
- Analysed 205 competitor bid lists to show that 50% of stalls drew 5+ bidders, and designed low / mid / high competition scenarios to handle NEA's capped bid disclosure.
- Built dynamic Excel tools: similar-stall rent benchmarks with an automatic fallback rule, and a price-index ranking shortlisting the 10 best-value centres of 89 (price index 0.39–0.98). Documented all assumptions and limitations in a team handoff sheet.
- Built an interactive Tableau dashboard of 1,809 bids across 89 centres: a geocoded rent map, bid trends by trade, region and year, trade share of awards, and a top 10 best-value centre shortlist.

EXPERIENCE

Teaching Assistant — IS115 Algorithms and Programming **Aug 2026 – Dec 2026**
Singapore Management University

- Selected to support IS115 after achieving an A grade in the course.
- Assisting students with programming concepts, algorithmic problem-solving, and course-related queries under Prof. Linh Kastner's guidance.

TECHNICAL SKILLS

- **Languages:** Python, C++, JavaScript, TypeScript, HTML, CSS
- **Frameworks:** Node.js, Express.js, Vue.js, Bootstrap
- **Databases:** MySQL, MongoDB, Supabase
- **Libraries:** Pandas, NumPy, SciPy, Matplotlib, Mongoose
- **Tools:** Power BI, Tableau, Microsoft Excel, Git, GitHub, Figma, Docker
